COD
FLYING FISH
HALIBUT
JOHN DORY

MACKEREL
SALMON
SARDINE
TUNA

SEA BREAM
GOLDEN TILEFISH
SNAPPER
SEA BASS

Learn more about some of these fish on the next pages.

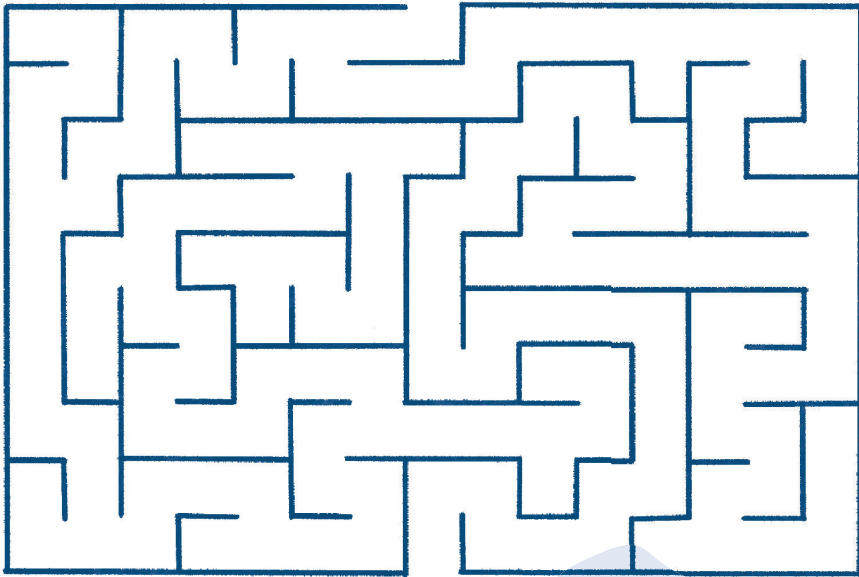

CAN YOU DRAW AN UNDER THE SEA SCENE?

THE INCREDIBLE EDIBLE OYSTER

Help the pearl get back to its oyster!

START HERE

YOU MADE IT!

Like other mollusks, oysters have soft bodies. The body is enclosed in a rough, oval-shaped shell that is often grayish or brownish white in color.

PEARLS OF WISDOM

Oysters make pearls?! It's true! Some oysters form pearls when a bothersome object, such as a grain of sand or a small fish, enters the area between the oyster's shell and its mantle. The oyster protects

itself from the object by wrapping it in many layers of a smooth substance called nacre, forming a pearl. Pearls come in a range of colors, and no one knows exactly how pearls develop their color.

THE MENU!

Fresh, real ingredients always made to order

FLINT'S FISH STICKS

crispy white fish sticks, made-to-order, and cooked to perfection 8

CHEESE TOASTIE

grilled cheese sandwich perfectly toasted and oozing melted cheddar 8

crispy chicken breast, sushi rice, served with a side of fresh fruit 8

MILLIONAIRE'S MAC N CHEESE

rich and creamy, just as it should be 8

B&R BURGER

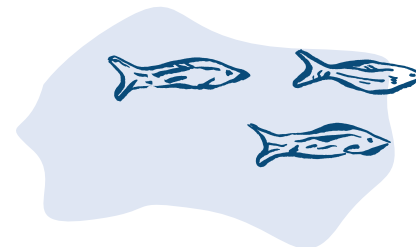

B&R Reserve beef, Beecher's smoked cheddar, served with French fries 8

PETITE STEAK FRITES

sliced B&R Reserve steak served with French fries 10

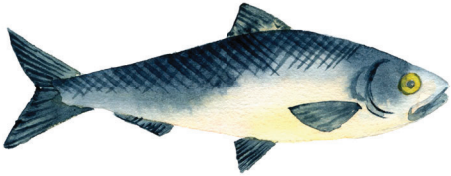

SAMURAI SUSHI ROLL

avocado, cucumber and shrimp 8

What do you call a fancy fish?
SO-FISH-TICATED!

LET'S LEARN ABOUT FISH

HERRING often travel in massive schools. Along their journey they become prey to salmon, tuna and other large fish.

COD have a distinct curvy line running from the gill slit above the pectoral fin, to the base of the caudal or tail fin.

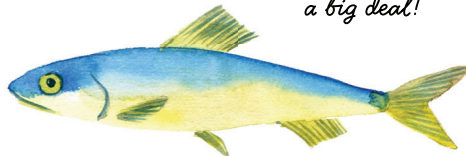

Check out my stripe!

TUNA mostly are found in temperate ocean waters but also in the tropics and cooler coastal regions.

THE ANCHOVY is a very important food source for many larger fish as well as marine mammals and birds like the brown pelican.

I may be small, but I'm kind of a big deal!

LET'S LEARN ABOUT FISH

Look at me! I have two eyes on one side of my body

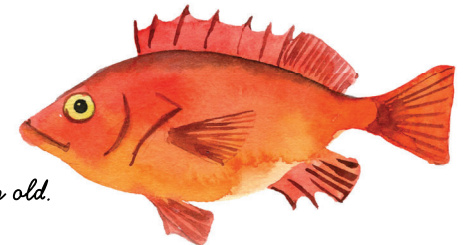

HALIBUT are a type of flatfish. As flatfish mature, the bones on the left side of the skull grow significantly faster than on the right side, so the left eye and nostril slowly migrate to the right side.

SAURY is a seafood in several East Asian cuisines and is also known by the name mackerel pike.

DEEPWATER REDFISH are part of the Rockfish family have a typical lifespan of 50 - 75 years!

I'm old.

SALMON typically hatch in the gravel beds of shallow fresh water streams and then migrate to the ocean as adults and live like sea fish.
